

Excerpt from the Preface: This book goes much beyond the scope of Economics of Our Patent System, the first of my ventures into the complex field of patent control. Patents still provide the prospect of remuneration and stimulate inventive activity, even though they seldom enable the inventor to realize financial returns. Moreover, they are still used in violation of antitrust legislation, and a high proportion of them are either invalid or suppressed. The records in support of these conclusions, far more voluminous now than thirty years ago, still include court decisions, government reports and hearings, and individuals studies. In this book, as in these records, more space is necessarily devoted to abuses little known than to alleged benefits generally admitted.
